

ABSTRACT OF THE DISCLOSURE

An electronic surface mount package provides a one piece construction package (with an open bottom) with one or more terminal pins molded into the package. Each of the pins have a notched post upon which a wire is wound which is from a toroid transformer carried within the package. Each of the posts are notched so their respective wires are separate from one another so as to prevent arcing. The case is opened at the bottom which prevents harm from expansion or cracking. A reinforcement beam is located laterally across the bottom of the package to provide mechanical strength for the case.
